Applicant: Ray Bojarski et al. Attorney's Docket No.: 00167-524001 / PT-2720-US-Serial No.: 10/765,214

Filed : January 28, 2004 Page : 2 of 11

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

- 1. (Currently Amended- see end for another claim 1 amendment option) A device comprising:
 - a body having:
- a first portion defining a tapered hole configured for guiding a member into a tube coupled to the body,
- a second portion defining a bore for receiving the tube for passage of the member into the tubetherethroughfrom the tapered hole, and
- a projecting surfaceledge formed on an internal surface of the body at an intersection between the tapered hole and the bore and configured to restrict the tube from passing from the second portion into the first portion,

the body defining a slot communicating with the hole and the bore for separating the body and the member while the member remains in the tube.

- 2. (Cancelled)
- 3. (Previously Presented) The device of claim 1 wherein the bore has a constant diameter.
- 4. (Previously Presented) The device of claim 1 wherein the bore is tapered.
- 5. (Cancelled)

Applicant : Ray Bojarski et al. Attorney's Docket No.: 00167-524001 / PT-2720-USSerial No. : 10/765 214

Serial No.: 10/765,214 Filed: January 28, 2004

Page : 3 of 11

(Previously Presented) The device of claim 1 wherein the slot extends from the tapered hole and the bore to an external surface of the body.

- (Previously Presented) The device of claim 1 further comprising the member and wherein the member comprises a suture thread.
 - 8. (Original) The device of claim 1 further comprising a handle extending from the body.
 - 9. (Currently Amended) A device comprising:
 - a tube: and
 - a body having:
- a first portion defining a tapered hole configured for guiding a member into the tube coupled to the body, [[and]]
- a second portion defining a bore for <u>receiving the tube for</u> passage of the member <u>into the tubetherethrough</u> from the tapered hole, and
- a <u>projecting surfaceledge</u> formed on an internal surface of the body at an intersection between the tapered hole and the bore <u>and configured to restrict the tube from passing from</u> the second portion into the first portion,
- the body defining a slot communicating with the hole and the bore for separating the body and the member while the member remains in the tube.
- 10. (Original) The device of claim 9 wherein the body is configured for connection to an end of the tube.
 - 11. (Cancelled)

Attorney's Docket No.: 00167-524001 / PT-2720-US-

Applicant : Ray Bojarski et al. Serial No.: 10/765,214 Filed : January 28, 2004 Page : 4 of 11

12. (Previously Presented) The device of claim 9 wherein the bore has a constant diameter

- 13. (Previously Presented) The device of claim 9 wherein the bore is tapered.
- 14. (Cancelled)
- 15. (Previously Presented) The device of claim 9 wherein the slot extends from the tapered hole and the bore to an external surface of the body.
- 16. (Original) The device of claim 9 wherein the tube defines an opening for receiving the member.
- 17. (Previously Presented) The device of claim 16 wherein a width of the opening is substantially the same as the width of the narrowest portion of the tapered hole.
- 18. (Previously Presented) The device of claim 9 further comprising the member and wherein the member comprises a suture thread.
- 19. (Original) The device of claim 9 further comprising a handle extending from the body.
 - 20. (Original) A method comprising:

coupling a body to an end of a tube, the body defining a tapered hole and a slot; guiding a member into the tube through the tapered hole; and separating the body and the member by passing the member through the slot.

Attorney's Docket No.: 00167-524001 / PT-2720-US-NP

Applicant: Ray Bojarski et al. Serial No.: 10/765,214

Filed : January 28, 2004 Page : 5 of 11

21. (Original) The method of claim 20 wherein coupling comprises receiving the end of the tube in a bore in the body, the bore communicating with the tapered hole.

22. (Currently Amended) A device comprising: guide means for guiding a member into a tube; receiving means for receiving the tube within the receiving means:

a <u>projecting surfaceledge</u> for restricting the tube from passing from the receiving means into the guide means; and

separating means for completely separating the member from the device while the member remains in the tube

- 23. (Previously Presented) The device of claim 1, wherein the slot extends from a terminal end of the first portion to a terminal end of the second portion.
- 24. (Previously presented) The device of claim 1, wherein the body is configured such that the tapered hole guides the member when advanced into the tube from a larger opening of the tapered hole to a smaller opening of the tapered hole.
- 25. (Previously Presented) The device of claim 9, wherein the slot extends from a terminal end of the first portion to a terminal end of the second portion.
- 26. (Previously presented) The device of claim 9, wherein the body is configured such that the tapered hole guides the member when advanced into the tube from a larger opening of the tapered hole to a smaller opening of the tapered hole.

Applicant: Ray Bojarski et al. Attorney's Docket No.: 00167-524001 / PT-2720-US-

Serial No.: 10/765,214 Filed: January 28, 2004

Page : 6 of 11

27. (Previously presented) The method of claim 20, wherein separating the body and the member by passing the member through the slot comprises separating the body and the member by passing the member through the slot while the member remains in the tube.

- 28. (Previously presented) The method of claim 20, further comprising decoupling the body from the end of the tube.
 - 29. (Currently Amended) A device comprising:
 - a body having:
 - a first terminal end portion defining a tapered hole, and
- a second terminal end portion opposite to the first terminal end portion, the second terminal end portion defining a bore in communication with the tapered hole,
- a <u>projecting surfaceledge</u> formed on an internal surface of the body at an intersection between the bore and the tapered hole,,

the body defining a slot extending from the tapered hole and the bore to an external surface of the body and extending from the first terminal end portion to the second terminal end portion; and

- a cylindrical handle connected to the body and projecting on only one side of the bodyat-a lecation opposite to the slot.
 - 30. (Currently Amended) A device comprising:
 - a body having:
- a first portion defining a tapered hole configured for guiding a member into a tube coupled to the body,
- a second portion defining a bore for passage of the member therethrough from the tapered hole, the bore having a diameter that is greater than a width of the narrowest portion of the tapered hole, and

a <u>projecting surfaceledge</u> formed at an intersection between the first portion and the second portion.

the body defining a slot communicating with the hole and the bore for separating the body and the member while the member remains in the tube.

31. (New) A device comprising:

a body having:

- a first portion defining a tapered hole configured for guiding a member into a tube coupled to the body,
- a second portion defining a bore for passage of the member therethrough from the tapered hole, the tapered hole and the bore being in communication with each other such that a channel is formed that extends from the first portion to the second portion; and
- a projecting surface formed on an internal surface of the body at an intersection between the tapered hole and the bore, the projecting surface projecting from the internal surface of the body to constrict a width of the channel to being less than a width of the bore at the intersection between the tapered hole and the bore.

the body defining a slot communicating with the hole and the bore for separating the body and the member while the member remains in the tube.
